Consist Nearshoring Services

Nearshoring services are Consist's answer to the enormous increase in companies' cost pressure. Using these services as an alternative and a supplement to their own capacities offers a great opportunity for any company, particularly for small to medium-sized companies. The focus isn't just on costs, but to strike a good balance between cost and quality for IT products and services.

Consist Nearshoring largely eliminates the risks of traditional shoring approaches like poor quality, communications problems, rework and so on that counteract any cost advantages. Consist combines the use of international location advantages with a clearly structured and comprehensive project management system. You not only benefit from the cost-effectiveness of the service, but also receive the quality you need in the timeframe you define.

What sets Consist Nearshoring apart from the rest?

- **Service Management:** All nearshoring projects are managed by experienced Consist project managers or service managers from Germany. We can therefore guarantee short communication paths to our customers and transparency in the provision of services.
- **Nearshoring Employees:** The nearshoring employees engaged by Consist speak German, have outstanding, certified educations, and are familiar with the German business mentality.
- **Standards:** Consist defines specifications for everyone involved with respect to the processes, methods, and standards to be used.
- **Tools and Technology:** The use of mature tools and a very good infrastructure increase the efficiency of cooperation.

Transparent Calculation for Nearshoring Services

You pay a monthly flat fee for the services agreed in a contract resp. a Service Level Agreement. This fee includes all services, even management actions such as coordination, control, personnel management, and training. There are no hidden costs.

At a glance

With mature Consist Nearshoring Services, benefit from particularly cost-effective and high-quality IT services under German cooperation and project management.

Together with our partner EBS Romania, we offer a variety of IT topics at a particularly attractive price/performance ratio.

When can Nearshoring Services provide support or an opportunity for you?

- Acute or chronic lack of IT staff
- Narrow time windows for implementation/delivery of services
- Too much daily business to keep up with or even start on strategic plans
- Short-term workload that cannot be flexibly met
- Tight budgets/cost pressure
- No resources free for new tasks
- Product quality amenable to improvement
- Short-term needs for research and proofs of concept

Pushing **IT** forward!

CONSIST
Business Information Technology

Easy and pragmatic! The four steps to Consist Nearshoring.

What do we offer as a part of Nearshoring Services?

- **Application Maintenance:** We take on responsibility for the maintenance and further development of standard software such as SAP, MS Sharepoint Server, Navision, Siebel, and custom software such as .NET, Java, and Natural. If you want to relieve your own employees of some of their load, or reassign them to other tasks, you can entrust us with the management of certain applications. With our mature procedures, we are able to take over the application completely within three to six months.
- **System Management:** Just as in application maintenance, we can take on responsibility for the management and administration of systems such as implementation, configuration management, software distribution, database administration and operations, as well as system monitoring and tuning.
- **Programming, Quality Assurance, First- and Second-level Support:** We can supplement existing teams with qualified employees. Important controlling functions such as architects, project managers, and quality designers can remain local.

Interested?

Try out our Consist Nearshoring Services and benefit from German project management with over 35 years of experience and competence as an IT service provider with first-class expertise.
