

Security in IT systems and processes

We have 25 years of experience in information technology, with more than 600 satisfied customers. One of our specialty areas is the security of complex IT systems and processes.

IT security as a strategy

While in former times IT was just a service unit, today it forms the backbone of every modern enterprise. Therefore, IT security has also strategic significance.

The proactive design of IT security as part of business strategy opens up new opportunities:

■ Management of risk:

The concept of IT security includes numerous legal regulations (business management requirements, Federal Data Protection Act (BDSG), German Commercial Code (HGB), German tax regulations (AO), Value Added Tax Act (UStG), Basic Regulations for Accessing Data and Auditing Digital Documents (GDPdU), Control and Transparency in Business Act (KonTraG), Euro-SOX, Digital Signature Act (SigG)) and operational requirements. These include data backup, user administration, access security, directory services, authentication, encryption, signatures, protection from data theft, network security, and archival.

Manage these complex topics actively, and ask for expert advice!

■ Value creation:

The orientation of IT security towards business strategy focuses on the essential processes and systems. Our risk analysis provides concrete approaches to the optimization of processes and systems. Secure processes and systems must generally be as simple and lean as possible, and thus efficient. Companies that are able to present a high and legally compliant level of security to their customers, gain a competitive advantage on the market.

At a glance

We provide our bundled knowledge along with years of experience in the project and consulting business with a focus on IT security. Documentation and validation of security for IT systems and the associated processes according to current standards and guidelines form an integral part of our portfolio. Our security expertise gives you the opportunity to use IT security as an added value and competitive advantage.

Within our areas of expertise such as electronic signatures, electronic waste record procedure, and digitalization in health-care we are able to offer concrete solutions, including system integration and implementation.

Quick questions

- Are you the only person reading your e-mails?
⇒ Secure your e-mails with encryption and signatures!
- Is your information security adequate?
⇒ Secure your data and systems according to roles and security requirements!
- Is your process security adequate?
⇒ Secure your processes through suitable control mechanisms!

Pushing **IT** forward!

Business Information Technology

Our offering

We provide support in managing your IT security actively, either enterprise-wide or for individual projects, systems, and products:

- Quick check:
Brief analysis of your company, with a status report and approaches, at a fixed price
- Comprehensive IT security concept tailored specifically to your needs
Risk analysis which lists and assesses your existing processes, structures, and systems
- Creation of required security regulations, including consulting on implementation or the implementation itself
- Support in obtaining security certification
- Documentation of IT security for systems, processes, and compliance with legal requirements
- Independent contact for IT security issues

Areas of special expertise

Besides general security issues, we also offer you our special expertise on topics such as:

- Electronic signatures in compliance with the Digital Signature Act (SigG) and Digital Signature Ordinance (SigV)
(Signature application components, signature cards, card terminals, archival of e-signatures)
- Secure mail systems
- Directory services and PKI
- Electronic Record Procedure (eANV) in waste management
- Healthcare (introduction of the new healthcare card and health professional card)
- Secure networks and VPN solutions

Interested?

Call us and arrange a non-obligatory consultation. We will be happy to provide you with a subsequent risk analysis and a security concept for your enterprise.
