

Consist Solutions and Services

Integration Technology

PrintBOS: Flexible, cost-cutting output management processes

PrintBOS supports the intelligent post-processing of print output data. On top of integrating graphical elements such as bar codes, logos and CAD drawings to alphanumeric print output, PrintBOS enables a full post-processing workflow and supports digital signatures, multiple messaging, and archiving. PrintBOS supports a variety of platforms. The PrintBOS InkTon module addresses the high cost of toner and ink cartridges in office environments, and reduces these cost by up to 50%.

Consist Content Manager: The integrative CMS solution

Consist Content Manager is a comprehensive solution, completely based on XML, for the creation, editing, administration, publication and distribution of content seamlessly. The application enables one to generate content and add any form of document, image or video for later publication, within or across your organization. This process is performed through an intuitive web interface.

Attunity: High-performance process integration across all platforms

The Attunity product family offers reliable high-performance process connectivity: Attunity Connect enables cross-platform access to data and applications based on adapters using a standardized SQL access. While being used in many BI, migration and integration scenarios, Attunity Connect is also part of the Oracle Transparent Gateway product. When mass data have to be processed, the Attunity Change Data Capture product allows the extraction of just those data that have been changed compared to a previous situation - a very strong tool when high performance is required in mass data update processes.

SAP XI Legacy Adapter: Integrating Legacy Data into SAP processes

The SAP XI Legacy Adapter allows the access from SAP business processes to legacy data and applications, using the new SAP NetWeaver Exchange Infrastructure (XI). As an extension of the Attunity Connect product family, the adapter supports a huge variety of data sources. SAP has certified the SAP XI Legacy Adapter together with Attunity Connect for the access to Adabas C.

ApplinX: Taking Legacy Applications into SOA environments

While service oriented architectures are becoming a standard, legacy applications have to be encapsulated for a smooth integration. ApplinX allows an easy modernization of existing host applications in modern JAVA and .Net environments, offering e.g. a quick web enabling of NATURAL applications.

Security Technology

Certiware: Enabling your processes for digital signatures

This middleware adds the handling of digital signatures and encryption to existing application software. CertiWare supports simultaneously multiple protocols and smart cards and is thus perfectly suited for enterprise solutions in the eHealth and eBilling markets. The use of standard JAVA allows the implementation on any server, including dedicated Connector boxes.

IntellinX: Risk management for SAX and Basel II compliance

The increasing requirements for risk management from the Sarbanes-Oxley act and the Basel II regulations require adequate tools to monitor the appropriate usage of IT applications. IntellinX supervises the traffic on mainframe switches and offers a variety of analytic post-processing features. The non-intrusive monitoring tool excels by adding no computing load on the mainframe.

Business Applications

Consist's business applications draw on more than 30 years of experience in commercial enterprise applications. The various solutions offer comprehensive functionality combined with ease-of-use, and are proven in many installations world-wide. Underlying technologies are typically JAVA and RDBMS, however classical NATURAL / ADABAS solutions are also available.

ConsistGEM	The most flexible & powerful ERP package with integrated BI functionality
Consist ERPplus	A portal solution for logistic process management, including Supply Chain Management, Transportation Management, and B2C services
Consist eFactor@	Managing the e-Billing lifecycle
ConsistHR	A Payroll and Human Resource Management solution
ConsistHIS	A fully integrated clinical, financial and management information system designed for the continuum of care
ConsistTRS	A system for the transportation business, offering comfortable reservation & ticketing on the web
Consist eBidding	Internet-based procurement with comfortable bidding and offers management
ConsistGM	Web-based tax and duties collection
ConsistGP	Process Management with seamless integration to existing applications
RFID/AIS Server Engine	Integrating localization and status data into your logistics, security, and sales services
Modawi	Meeting the IT requirements for the new EU waste management regulations

Services

Application Maintenance Services: Outsourcing the maintenance of legacy applications

Based on strict procedures and individual SLA's, dedicated application maintenance teams maintain legacy applications in a variety of technologies. Applications vary from mission-critical NATURAL or 3GL-systems to JAVA and even small MS Access across many industries, such as banking, manufacturing, and services.

Professional Services: Top Know-how for reliable IT solutions

A huge pool of experienced IT specialists deliver integration and development solutions subject to the highest standards. Teams are available in Germany, Spain, Israel, and South America to provide any combination of on-shore, near-shore and off-shore services from consulting workshops across sourcing support to comprehensive turn-key projects. Specific know-how has been gathered with Software AG technology, JAVA, .Net and SAP NetWeaver in large enterprise environments across all industries.
