YEARS

Why Consist uses Splunk as big data technology

A big data solution must be able to handle even the highest data peaks. Companies need an observability solution that can cope with peak utilization without delays or lost data points.

There is no other comparable platform for obtaining secure, transparent information from raw data and making it available for effective use.

Splunk is the answer to how companies can operate in an interdisciplinary and future-proof way in the digital age.

10 years of successful partnership between Consist and Splunk – our heartfelt congratulations to Consist! We appreciate this very special combination of extensive expertise, innovative consulting and long-standing customer relationships, regional and beyond, which makes Consist a great partner. With its professional services for Splunk, Consist has repeatedly proven its worth - not least through many awards in our international competitions. We would like to thank the management and the employees of Consist, with whom we know our customers are in the best hands.

Splunk and Consist – Partnership of Excellence for Big Data

“With Splunk, we have been able to significantly boost our performance.”

Henrik Naß, System Management and Monitoring at SPIEGEL publishing house

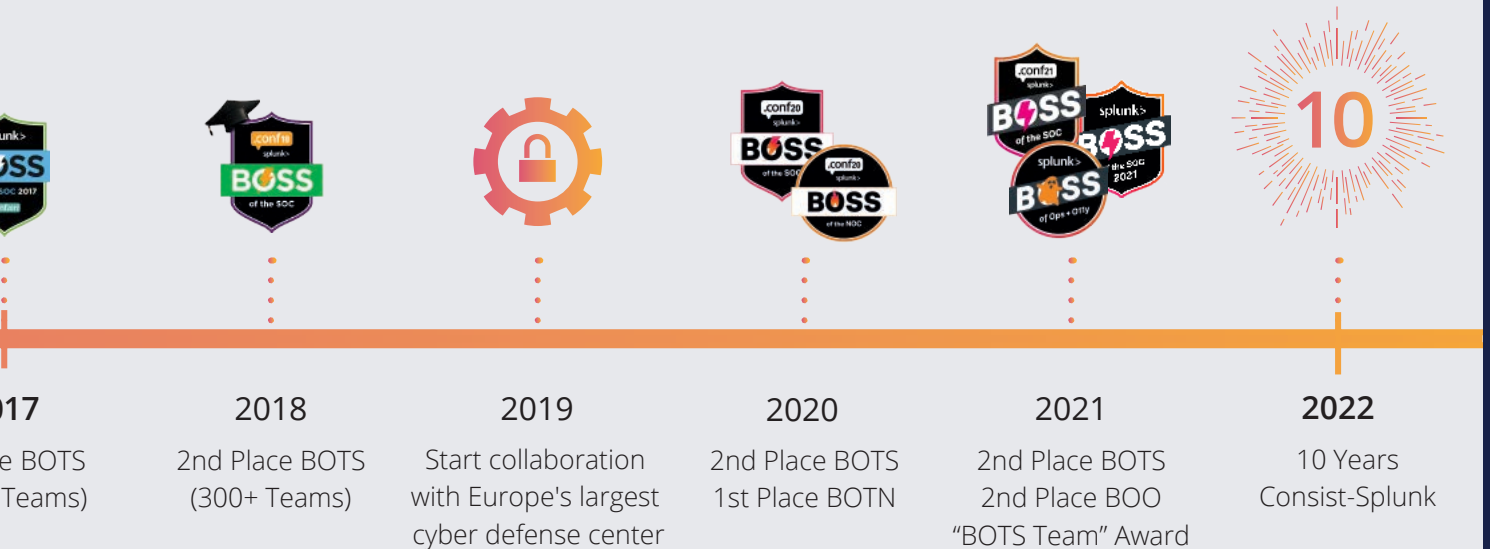

“ I am excited about Splunk’s limitless flexibility. It covers everything from traditional IT operations and monitoring, via information security, through to the physical world of existing machines. Depending on the use case and customer, both the data and what is required of it changes every time, but it can always be analyzed with Splunk.

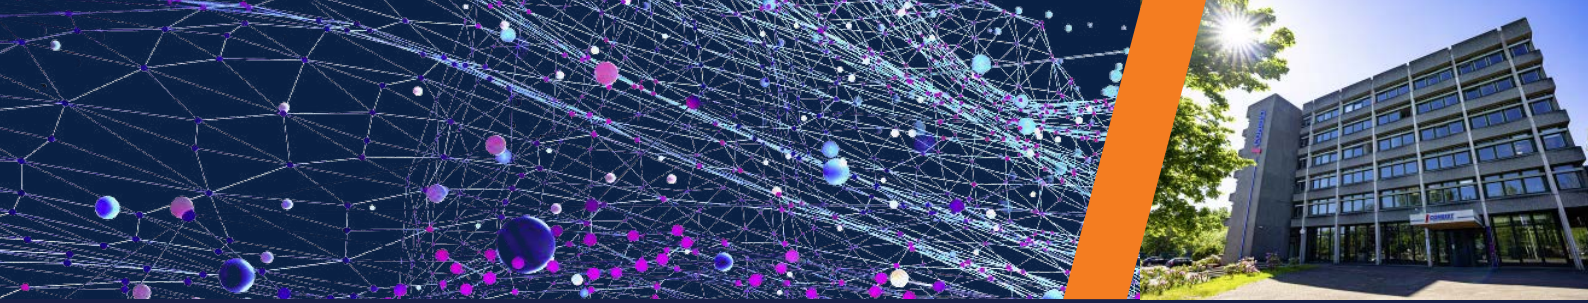

Martin Müller, Principal Consultant Splunk, several times winner of BOTS (worldwide and in the DACH region), member of the Splunk Trust

Platform operations, content engineering and use cases in the IT security environment are just some of Splunk’s specialist fields, which Consist’s consulting teams often implement in highly complex, time-critical IT infrastructures.

30+ Splunk Consultants
Greatest Splunk Expertise in the DACH region

The long-term, trust-based relationships with customers that develop from this are welcome proof of their particular expertise.

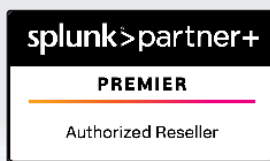

Your IT Partner Consist Software Solutions

Consist Software Solutions GmbH is a specialist in digital transformation, IT security and managed services. With more than 200 employees at its offices in Kiel and Frankfurt, the company, which was founded in 1994, is continuing to pursue its sustained growth strategy, making Consist one of the most experienced IT service providers.

Starting out as the “Newcomer of the year for the DACH region”, Consist has been a partner of Splunk since 2012. Consist’s highly qualified Splunk architects enable companies to achieve greater security and better performance for their data. The IT company offers a full service package for Splunk, from the initial consultation through to managed services. Since 2016, Consist has operated Splunk-based SIEM systems for customers, including Security as a Service – SIEM operation in a SOC.

About Splunk

Splunk is the world’s first data-to-everything platform and enables cross-system searches, capture and evaluation of all real-time and historic data in a central location. With this platform, companies no longer have to think about where their data comes from. Instead, they can concentrate on the results they want to achieve with their data. Splunk provides innovative pioneers from IT, Security, IoT and Business Operations with a comprehensive real-time overview of their business activities.

The company, which was founded in 2003, is based in San Francisco. In addition to many other European subsidiaries, Splunk has branches in Germany, Austria and Switzerland and helps customers like Vodafone, Otto and Deutsche Bahn turn their data into doing.
